

Insights into scale-up collaboration for Cultured Meat companies & Merck

Tami Dvash, PhD,
VP R&D for Cultivated Meat Products

"As food applications of cellular agriculture progress from research and development to pilot and subsequently towards large-scale production and mass commercialization, it becomes especially vital to have supportive supply chain partners. By helping enable a robust supply of food-grade growth media at the required quantity, quality, and cost, Merck helps shorten our time to market, propelling our impact on the future of food."

Dr. Frederic Berkemann
Commercial Director Cultivated Meat

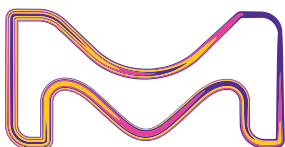

"The project with Aleph Farms makes us extremely proud as it perfectly showcases how we provide a real value to our customers, from development stage to the final media that is used in their large-scale production. From the start, we collaborated on all levels with Aleph Farms and we provided access to our expertise in questions around QA/QC, Regulatory, Supply chain, Sustainability and many others."
