

Secure, Reliable, Convenient: ICR/ICRplus Contact and Settle Plates

Designed to meet the highest requirements of microbial monitoring in sterile production environments

We offer a broad range of ready-to-use culture media to detect a wide range of microorganisms.

Supplementation of the media with neutralizers like lecithin, polysorbate 80, histidine and sodium thiosulfate facilitates the growth of organisms in the presence of anti-microbial components.

Secure and reliable:

- Data matrix barcode on each plate ensures data integrity
- H₂O₂-impermeable triple-sleeve packaging for use in clean rooms and isolators
- Produced in clean rooms and gamma-irradiated to minimize the risk of cross contamination
- Lockable plates (ICRplus) available for safe transportation

Convenient:

- Room temperature storage so can be kept at site of use
- Long shelf life (up to 12 months) for less growth promotion tests, saving time and lab cost
 - SDA culture media in pink plates to distinguish easily between TSA and SDA media formulation
 - Supplemented with neutralizers to inactivate a broad range of disinfectants and β -lactam antibiotics
- New media formulation with raw material of non-animal origin to minimize the risk of BSE contamination

Certificates of Analysis will contain additional outstanding and helpful information:

- Functionality test of data matrix code
- Verification of anaerobic growth of lockable plates (*Clostridium sporogenes*)
- Disinfectant neutralization test as part of batch release testing

Ready-to-use culture media for surface and personnel monitoring: Contact plates

Article #	Plate type	Description	Units/ package size	Medium	Shelf life (days)
Tryptic soy agar (TSA) for surface and personnel monitoring					
146552	Lockable contact plate	Tr.Soy Cont.A + LT-ICR+	20/200	TSA	270
146195	Non-lockable contact plate	Tr. Soy Cont. A. w. LT-ICR 2284e	20/200	TSA	270
